OPERATION AND MAINTENANCE MANUAL

1st Edition

Serial No. 10001 and Higher

For the customers in the U.S.A.

Warning

This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment.

Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

The shielded interface cable recommended in this manual must be used with this equipment in order to comply with the limits for a computing device pursuant to Subpart J of Part 15 of FCC Rules.

For the customers in Canada

This apparatus complies with the Class A limits for radio noise emissions set out in radio interference regulations.

Pour les utilisateurs au Canada

Cet appareil est conforme aux normes Class A, pour bruits radioélectriques. Tel que spécifier dans le règlement sur le brouillage radioélectrique.

このマニュアルに記載されている事柄の著作権は当社にあり、説明内容は機器購入者の使用を目的としています。従って、当社の許可なしに無断で複写したり、説明内容(操作、保守等)と異なる目的で本マニュアルを使用することを禁止します。

The material contained in this manual consists of information that is the property of Sony Corporation and is intended solely for use by the purchasers of the equipment described in this manual.

Sony Corporation expressly prohibits the duplication of any portion of this manual or the use thereof for any purpose other than the operation or maintenance of the equipment described in this manual without the express written permission of Sony Corporation.

Le matériel contenu dans ce manuel consiste en informations qui sont la propriété de Sony Corporation et sont destinées exclusivement à l'usage des acquéreurs de l'équipement décrit dans ce manuel.

Sony Corporation interdit formellement la copie de quelque partie que ce soit de ce manuel ou son emploi pour tout autre but que des opérations ou entretiens de l'équipement à moins d'une permission écrite de Sony Corporation.

Das in dieser Anleitung enthaltene Material besteht aus Informationen, die Eigentum der Sony Corporation sind, und ausschließlich zum Gebrauch durch den Käufer der in dieser Anleitung beschriebenen Ausrüstung bestimmt sind.

Die Sony Corporation untersagt ausdrücklich die Vervielfältigung jeglicher Teile dieser Anleitung oder den Gebrauch derselben für irgendeinen anderen Zweck als die Bedienung oder Wartung der in dieser Anleitung beschriebenen Ausrüstung ohne ausdrückliche schriftliche Erlaubnis der Sony Corporation.

Section 1. OPERATION

1-1. Overview

The DME-5000 digital multi effects produces high image quality effects by all-digital processing. It can be controlled from a BKDM-5070 control panel, or operated together with a DVS-8000/8000C digital video switcher system, and controlled from the same BKDS-8010 control panel as the switcher system.

1-1-1. Principal Features

Serial digital I/O

The unit uses serial digital I/O for all connections, each of which therefore requires only a single coaxial cable. Compared with conventional parallel interfaces, this feature reduces the effort required to set up connections, and the absence of skew timing errors increases reliability and allows longer-distance transmission.

Compatible with both composite and component formats

With four optional I/O boards (BKDM-5010/5011/5012/5013) available, the unit is compatible with all combinations of component and composite, digital and analog formats. When connecting the unit to an existing system, select the optional I/O board suitable for the switcher to be used.

Integrated operation with a DVS-8000 series switcher system

You can connect a DME-5000 unit to a DVS-8000/8000C switcher system, and control both units from a single control panel. This provides an integrated system, operating entirely in digital mode, and yielding perfect picture quality. The high-level DME LINK® function supports effects such as DME wipes, which combine video effects with the switcher wipe function.

Concurrent multichannel operation

You can connect two to four DME-5000 units together and use the same control panel to control up to four channels simultaneously or a selected channel only.

Image combination function

You can connect together two or more DME-5000 units fitted with the BKDM-5020/5021 digital combiner board and combine up to four channels in a single image. This combination function uses special signals containing depth information, which enables highly realistic effects, in which the images can be manipulated in 3-dimensional space.

Automatic switching between frame and field processing

The motion detector automatically switches the unit between frame mode for frame-by-frame image processing and field mode for field-by-field image processing according to the movement of the image. Each frame of image information processed in frame mode is equivalent to two fields of image information, so that the frame mode ensures no degradation of picture quality. To produce a new image using effects, frame mode will enable more precise processing than field mode. However, for processing to realize natural and smooth movement of an image, the field mode will be more suitable than the frame mode.

1-1-2. Important Notes

Handling circuit boards

It should not normally be necessary to remove or replace boards. For maintenance purposes, or when installing optional boards, observe the following precautions:

- Before inserting or removing a board, ensure that the power is switched off (see page 1-4(E)).
- Before turning the power on after inserting a new board, make sure that the number on the board matches that on the slot. See Section 3-4 "How to Install and Remove the Boards" for more details.

These precautions are important to avoid damage to the circuit boards.

Circuit breaker

If a current surge occurs in the unit, the breaker will trip and cut off the power automatically (see page 1-4(E)).

If the power does not come on when you switch on, the breaker may have tripped. Open the front panel and push the BREAKER button in.

1-2. Location and Function of Parts

1-2-1. Front Panel and Interior

Front panel

How to open the front panel

Press the bottom end of each door handle, and pull forward.

POWER indicator

Door handles

Interior

- 1 POWER switch**
Powers the unit on and off.
- 2 BREAKER button**
If an excess current flows in the unit, this button jumps out to cut off the power supply automatically.
- 3 RESET switch**
Resets the CPU of the unit.
- 4 CPU RUN indicator (red)**
Comprises LEDs which flash in sequence while the CPU is operating normally.
- 5 H-phase (horizontal phase) setting switches for memory reading address**
Three dip switches used to set the horizontal phase of the image memory reading address for test purposes. The switches are arranged vertically, with the most significant bit at the top (2-4-4 bits).
- 6 V-phase (vertical phase) setting switches for memory reading address**
Three dip switches used to set the vertical phase of the image memory reading address for test purposes. The switches are arranged vertically, with the most significant bit at the top (1-4-4 bits).
- 7 Interpolation phase setting switch**
Sets the phase of data to be used to interpolate the data read from the image memory. Keep this switch set at 3h.
- 8 PASS switch for self-diagnosis**
Setting bit 1 of this switch to ON causes the internal operation of the DPR-18 and ALU-11/12/13 boards to be entirely skipped. Keep the bit 1 set to OFF except when carrying out self-diagnostic testing of the unit.
- 9 V-phase (vertical phase) setting switches for memory writing address**
Three dip switches used to set the vertical phase of the image memory writing address for test purposes. The switches are arranged vertically, (sandwiched round the H-phase setting switches 10), with the most significant bit at the top (1-4-4 bits).
- 10 H-phase (horizontal phase) setting switches for memory writing address**
Three dip switches used to set the horizontal phase of the image memory writing address for test purposes. The switches are arranged vertically, with the most significant bit at the top (2-4-4 bits).
- 11 MODE selector switch**
Consists of two bits used to change the operation modes of the unit as follows:
Bit 1: ON = 525 mode, OFF = 625 mode
Bit 2: ON = D1 mode, OFF = D2 mode
Ensure that the settings of these bits are consistent with the setting of the switch S3 on the CPU-82 board.
- 12 PASS switch for self-diagnosis**
Setting bit 1 of this switch to ON causes the internal operation of the MEM-41 board to be skipped. Keep bit 1 set to OFF except when carrying out self-diagnostic testing of the unit.

* These are option boards, but since they are video I/O interfaces, this unit will not operate without them. For details, see "Optional boards" on page 1-9(E) and the operation and maintenance manuals for the respective boards.

- 13 SELECT V (vertical filter parameter) switch**
Four bits, 1 to 4 from the top down, used to set vertical filter parameters as follows:
Bit 1: Turns on/off the DEFOCUS circuit.
Bit 2: Switches the parameter setting mode between manual and automatic.
Bit 3: Selects the parameter setting range of 0-15 steps or 16-32 steps for manual setting mode.
Bit 4: Reserved for future use.
- 14 PARAMETER V (vertical filter constant) switch**
Sets the vertical filter constant to be applied when the manual setting mode is selected with the SELECT V switch bit 2 **13**. You can select one of the 16 settings 0-15 or 16-32 depending on the setting of the SELECT V switch bit 3 **13**.
- 15 SELECT H (horizontal filter parameter) switch**
Six bits, 1 to 6 from the top down, used to set horizontal filter parameters as follows:
Bit 1: Turns the Y-filter bypass on or off.
Bit 2: Turns the C-filter bypass on or off.
Bit 3: Turns the K-filter bypass on or off.
Bit 4: Switches the parameter setting mode between manual and automatic.
Bit 5: Selects the parameter setting range of 0-15 steps or 16-32 steps for manual setting mode.
Bit 6: Turns the DEFOCUS circuit on or off.
- 16 PARAMETER H (horizontal filter constant) switch**
Sets the horizontal filter constant to be applied when the manual setting mode is selected with the SELECT H switch bit 4 **15**. You can select one of the 16 settings 0-15 or 16-32 depending on the setting of the SELECT H switch bit 5 **15**.
- 17 PASS switch for self-diagnosis**
Setting bits 1 to 3 of this switch to ON causes the Y, C, and K video signal circuits to be skipped, respectively. Keep the three bits set to OFF except when carrying out self-diagnostic testing.
- 18 Move signal DELAY setting switch**
Sets the move signal delay. This switch is for use by Sony service personnel only.
- 19 MOSAIC H (horizontal) START phase setting switches**
Three dip switches used to set the phase of the horizontal start address for mosaic effect generation. The switches are arranged vertically, with the most significant bit at the top (2-4-4 bits). These switches are for use by Sony service personnel.
- 20 MOSAIC V (vertical) START phase setting switch**
Sets the delay (0H to 15H) for the vertical start address for mosaic effect generation. This switch is for use by Sony service personnel.
- 21 BORDER V (vertical) phase setting switches**
Three dip switches used to set the vertical phase of the added border. The switches are arranged vertically, with the most significant bit at the top (1-4-4 bits). Change the settings of these switches when changing the mode selection between 525 and 625 lines.
- 22 BORDER H (horizontal) phase setting switches**
Three dip switches used to set the horizontal phase of the additional border. The switches are arranged vertically, with the most significant bit at the top (2-4-4 bits). Change the settings of these switches when changing between D1 and D2 modes.

23 PASS switch for self-diagnosis

Setting bits 1 to 3 of this switch to ON causes the K, C, and Y video signal circuits to be skipped, respectively. Keep the three bits set to OFF except when carrying out self-diagnostic testing.

24 DROP SHADOW V (vertical) LIMIT phase setting switches

Three switches used to set the vertical phase for the limiters to prevent overflows at the top and bottom ends of the drop shadow. Of these switches arranged vertically, the top one is for setting the highest-order bit of the phase data, the second one for setting the next four bits, and the bottom one for setting the low-order four bits. These switches are for use by Sony service personnel.

25 DROP SHADOW H (horizontal) LIMIT phase setting switches

Three dip switches used to set the horizontal phase for the limiters to prevent overflows at the top and bottom ends of the drop shadow. The switches are arranged vertically, with the most significant bit at the top (2-4-4 bits). These switches are for use by Sony service personnel.

Optional boards

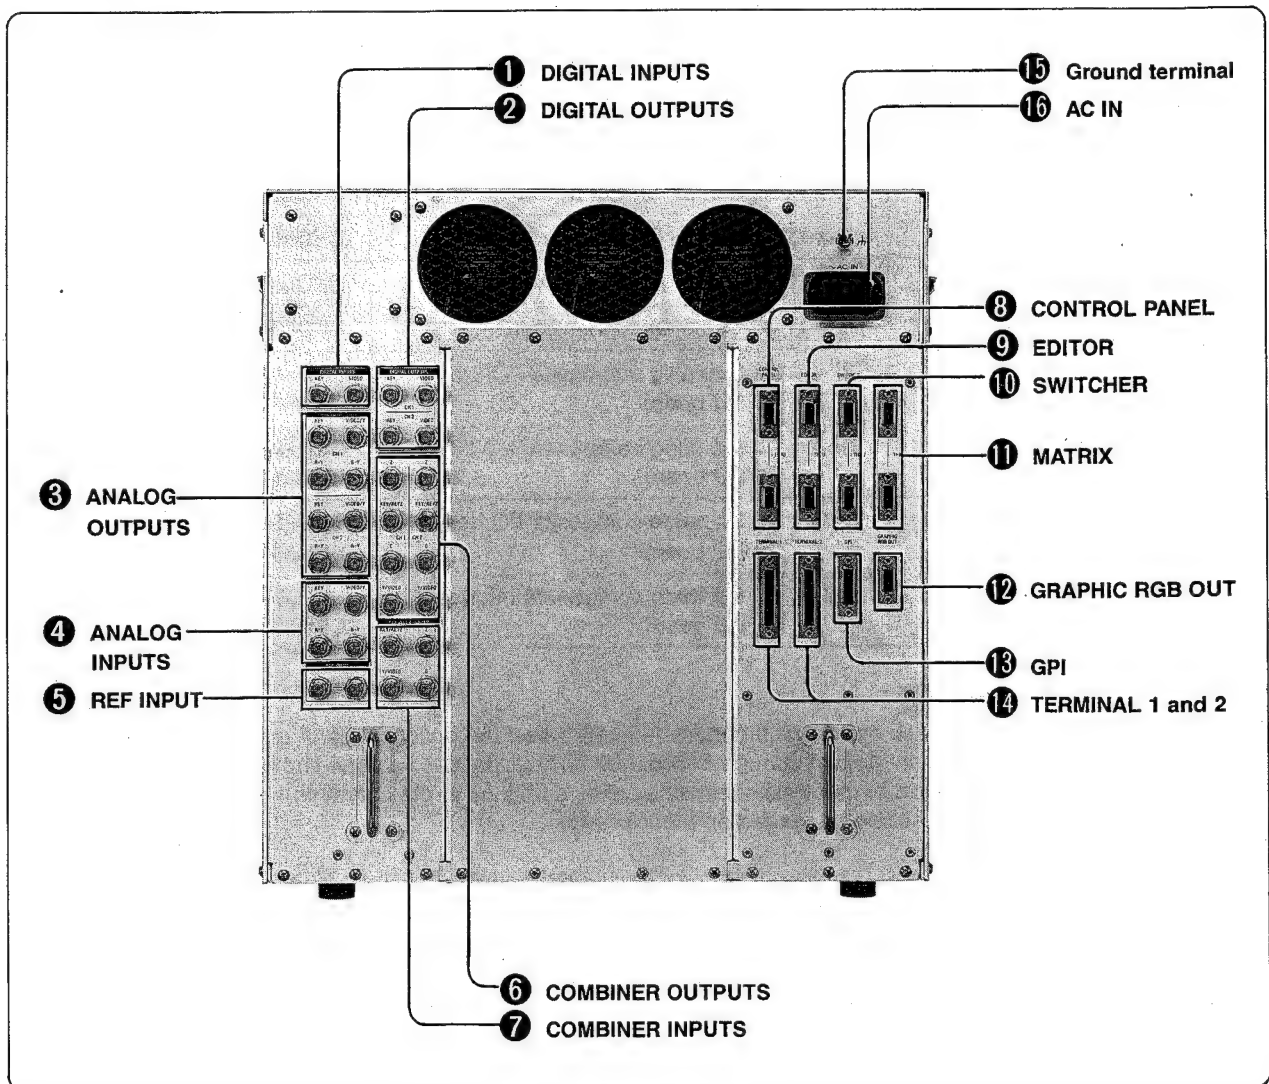

The following table gives the names and types of optional boards available, and the slot numbers of the circuit board slots reserved for them.

Slot No.	Board Name	Supplied as
2	DSC-58 graphic data display board	BKDM-5060
5	ALU-13 non-linear effects board	BKDM-5030
6	ALU-12 non-linear effects board	BKDM-5030
16	DLP-12 D2 digital combiner board	BKDM-5020
	DLP-11 D1 digital combiner board	BKDM-5021
17	DIF-8 D2 & analog composite I/O board D2 I/O board	BKDM-5010 BKDM-5012
	DIF-9 D1 & analog component I/O board D1 I/O board	BKDM-5011 BKDM-5013
18	IF-293 D2 & analog composite I/O board D2 I/O board	BKDM-5010 BKDM-5012
	IF-294 D1 & analog component I/O board D1 I/O board	BKDM-5011 BKDM-5013

Note

For each of the slot numbers 16 to 18, select the optional board appropriate for the system. You can change between D1 and D2 modes by changing the optional boards installed in these slots. In some cases a change in the operation mode may require settings to be changed on other boards.

1-2-2. Connectors on the Rear Panel

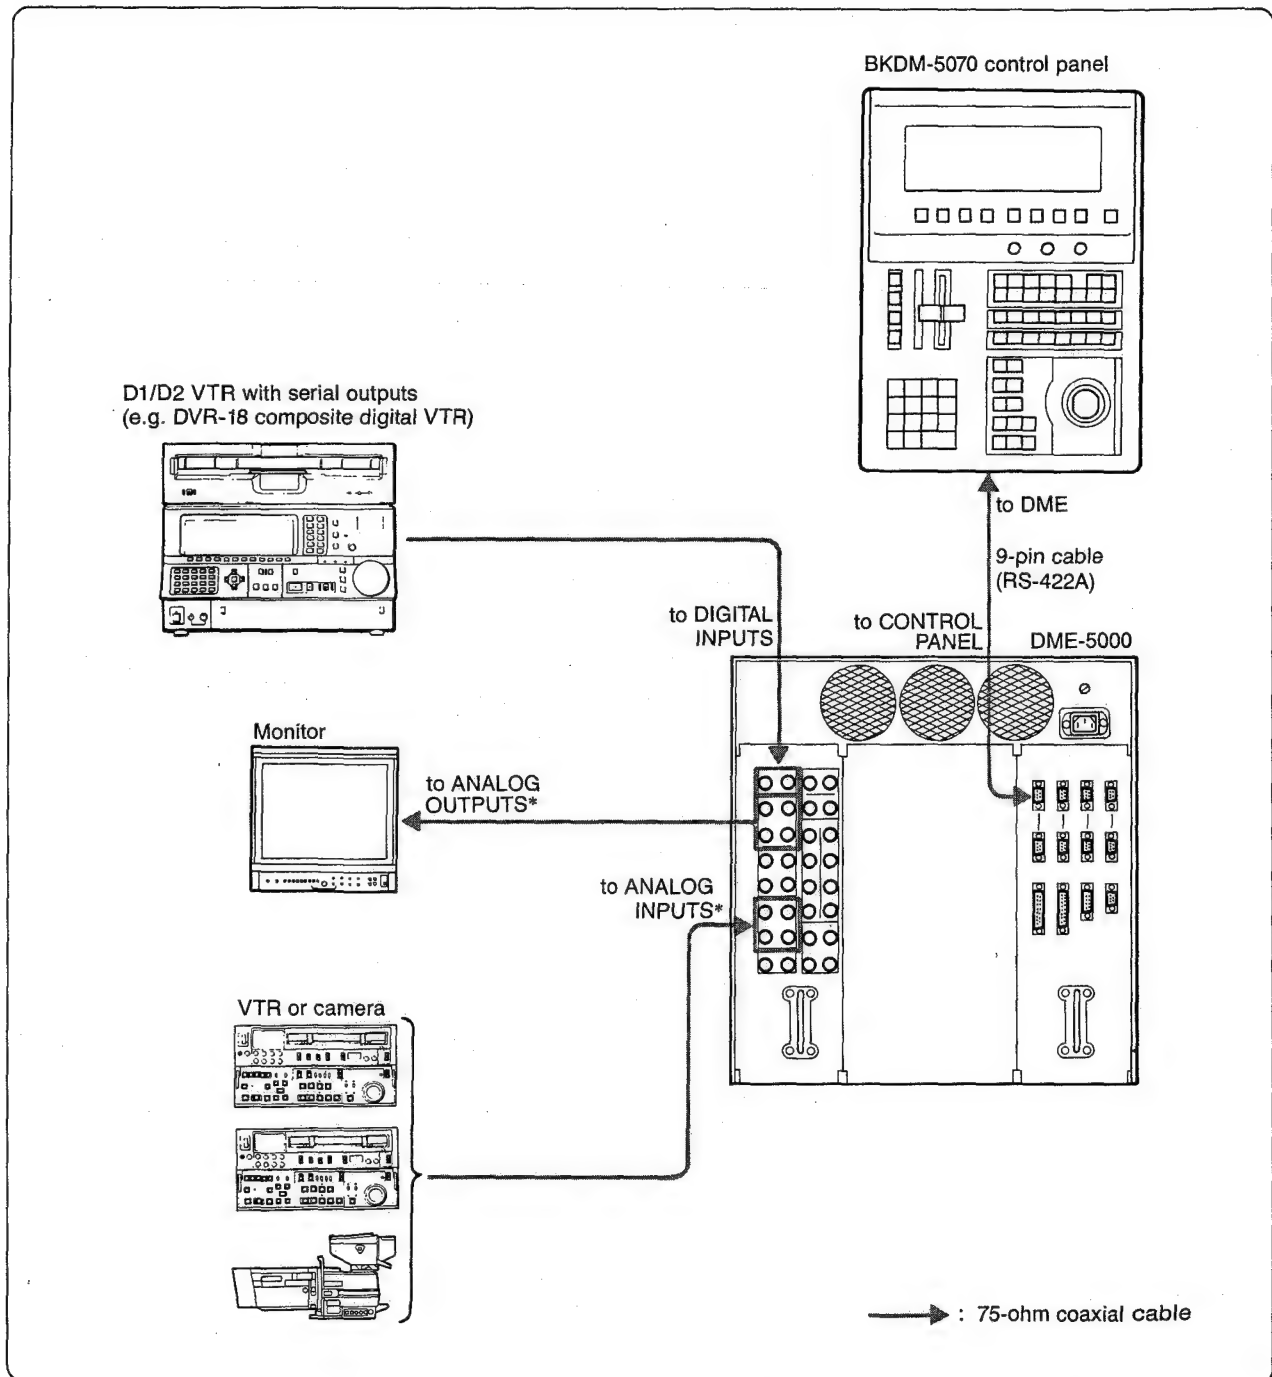

- 1 DIGITAL INPUTS (BNC)**
Input the serial digital video and key signals. When the phase difference between the input signals and the reference signal input from the REF INPUT connectors **5** is in a range of $-0.9H$ to $+0.1H$, the input signal phase is adjusted automatically. Using these connectors requires the BKDM-5010/5011/5012/5013 option board.
- 2 DIGITAL OUTPUTS (BNC)**
Output the serial digital video and key signals. The connectors for channels 1 and 2 (CH1 and CH2) output the same signals. Using these connectors requires the BKDM-5010/5011/5012/5013 option board.
- 3 ANALOG OUTPUTS (BNC)**
Output the analog video and key signals. The connectors for channels 1 and 2 (CH1 and CH2) output the same signals. Using these connectors requires the BKDM-5010/5011 option board.
- 4 ANALOG INPUTS (BNC)**
Input the serial digital video and key signals. Using these connectors requires the BKDM-5010/5011 option board.
- 5 REF INPUT (reference video input) (BNC)**
A pair of loop-through connectors used to input the analog reference video signal. The signal input to one of these connectors may be output from the other. When you use only one of them, be sure to terminate the other one with a 75-ohm terminator.
- 6 COMBINER OUTPUTS (BNC)**
Output the serial digital signals to combine the image produced by the unit and those produced by other DME-5000 units. In D1 (component) format, VIDEO and KEYZ are used. In D2 (composite) format, Y, C, KEY, and Z are used. The connectors for channels 1 and 2 (CH1 and CH2) output the same signals. Using these connectors requires the BKDM-5020/5021 option board.
- 7 COMBINER INPUTS (BNC)**
Input the serial digital signals to combine the image produced by the unit and those produced by other DME-5000 units. The combined image is output from the COMBINER OUTPUTS connector **6**. In D1 (component) format, VIDEO and KEYZ are used. In D2 (composite) format, Y, C, KEY, and Z are used. The connectors for channels 1 and 2 (CH1 and CH2) output the same signals. Using these connectors requires the BKDM-5020/5021 optional board.
- 8 CONTROL PANEL (D-SUB 9-pin)**
A pair of loop-through connectors for connection to the BKDS-8010 or BKDM-5070 optional control panel. You may control up to four DME-5000 units using their loop-through CONTROL PANEL connectors from the same external control panel. These connectors comply with the RS422-A standard.
- 9 EDITOR (D-SUB 9-pin)**
A pair of loop-through connectors for connection to external equipment such as the BVE-8000 editing control system, from which you can control the unit. You may daisy-chain two or more DME-5000 units using their loop-through EDITOR connectors to control them from the same external controller. These connectors comply with the RS422-A standard.
- 10 SWITCHER (D-SUB 9-pin)**
If you connect either one of these loop-through connectors to the DVS-8000 digital video switcher, you can control one of the four internal auxiliary buses (AUX 1 to 4) of the switcher from the DVS-8000.

- 11 MATRIX (D-SUB 9-pin)**
If you connect either one of these loop-through connectors to an external matrix switcher, you can use the matrix switcher to switch the signal to be input to the unit.
- 12 GRAPHIC RGB OUT (D-SUB 9-pin)**
Outputs the analog video signal (R, G, B, and SYNC) for input to a video monitor with R, G, and B input connectors.
Using this connector requires the BKDM-5060 option board.
- 13 GPI (general purpose I/O) (D-SUB 15-pin)**
Used to input or output trigger signals (up to four each for input and output) from or to external equipment. You may set the conditions for inputting or outputting each trigger signal.
- 14 TERMINAL 1 and 2 (D-SUB 25-pin)**
Connect these connectors to appropriate control terminals when required to initialize or inspect the unit.
- 15 Ground terminal**
Use this terminal to ground the system.
- 16 AC IN**
Connect this connector to an appropriate AC power supply using the power supply cord supplied.

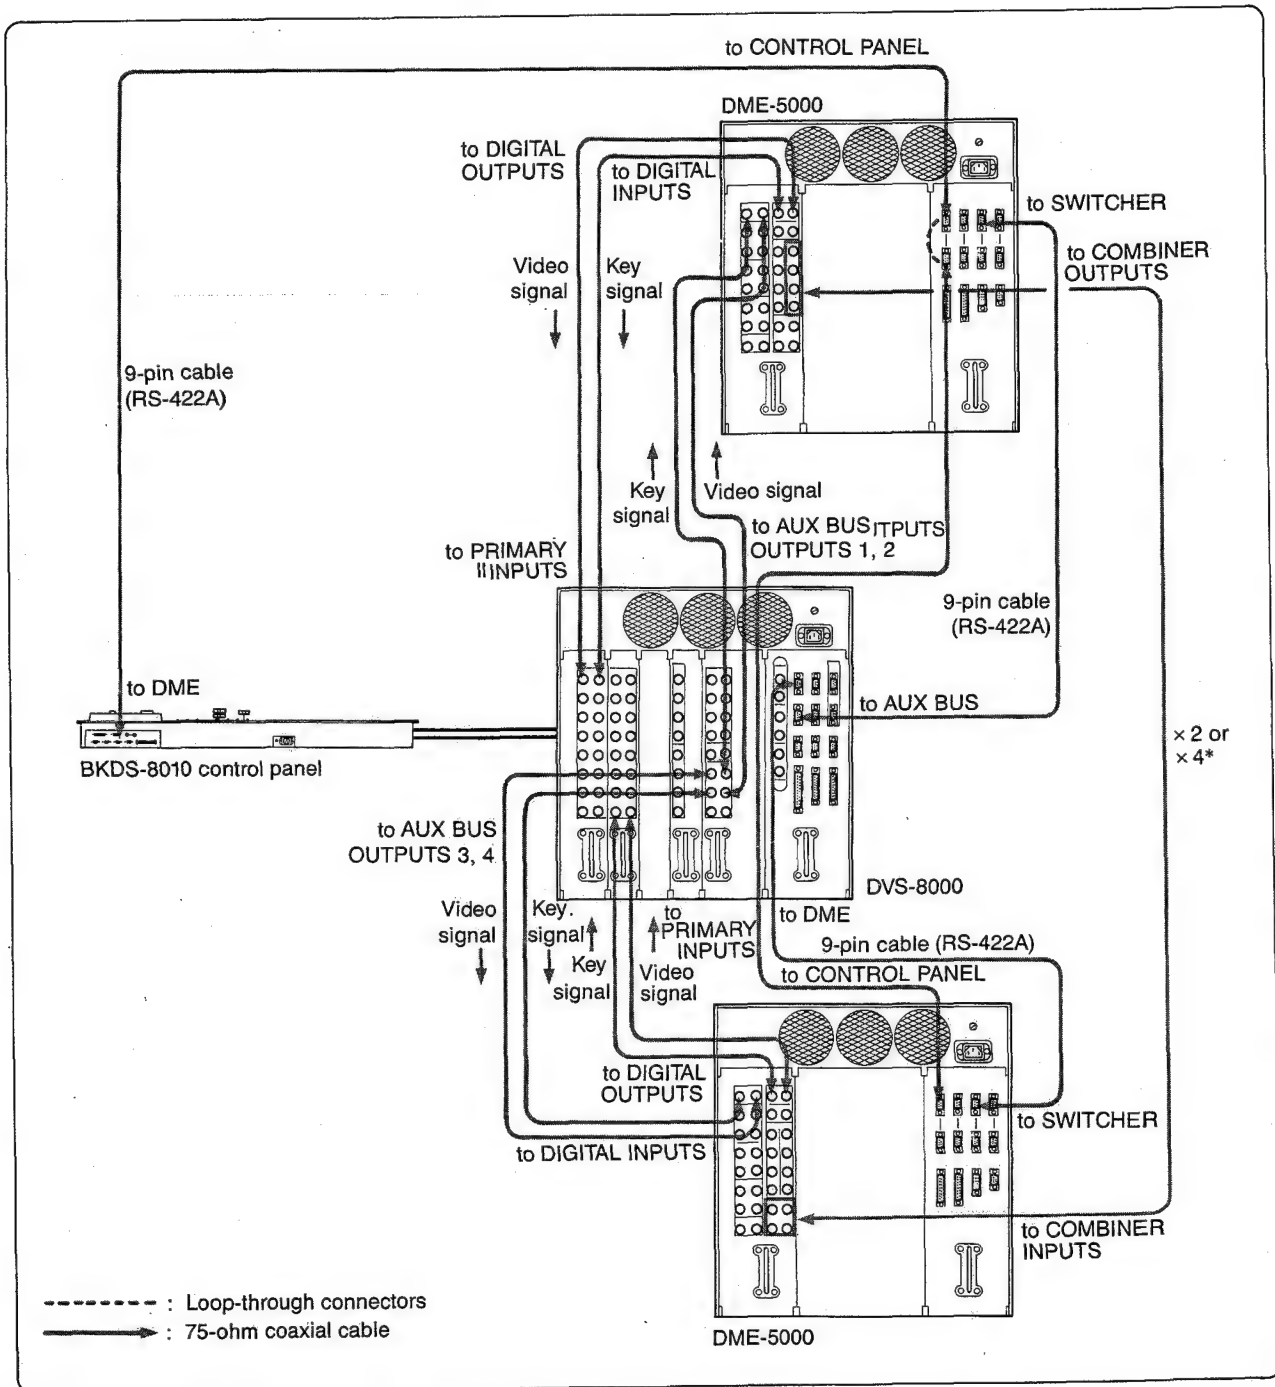

1-3. System Connections

1-3-1. Connection with Dedicated Control Panel and I/O Equipment

* Use Y, R-Y, B-Y, and KEY to input/output component signals, or VIDEO and KEY to input/output composite signals.

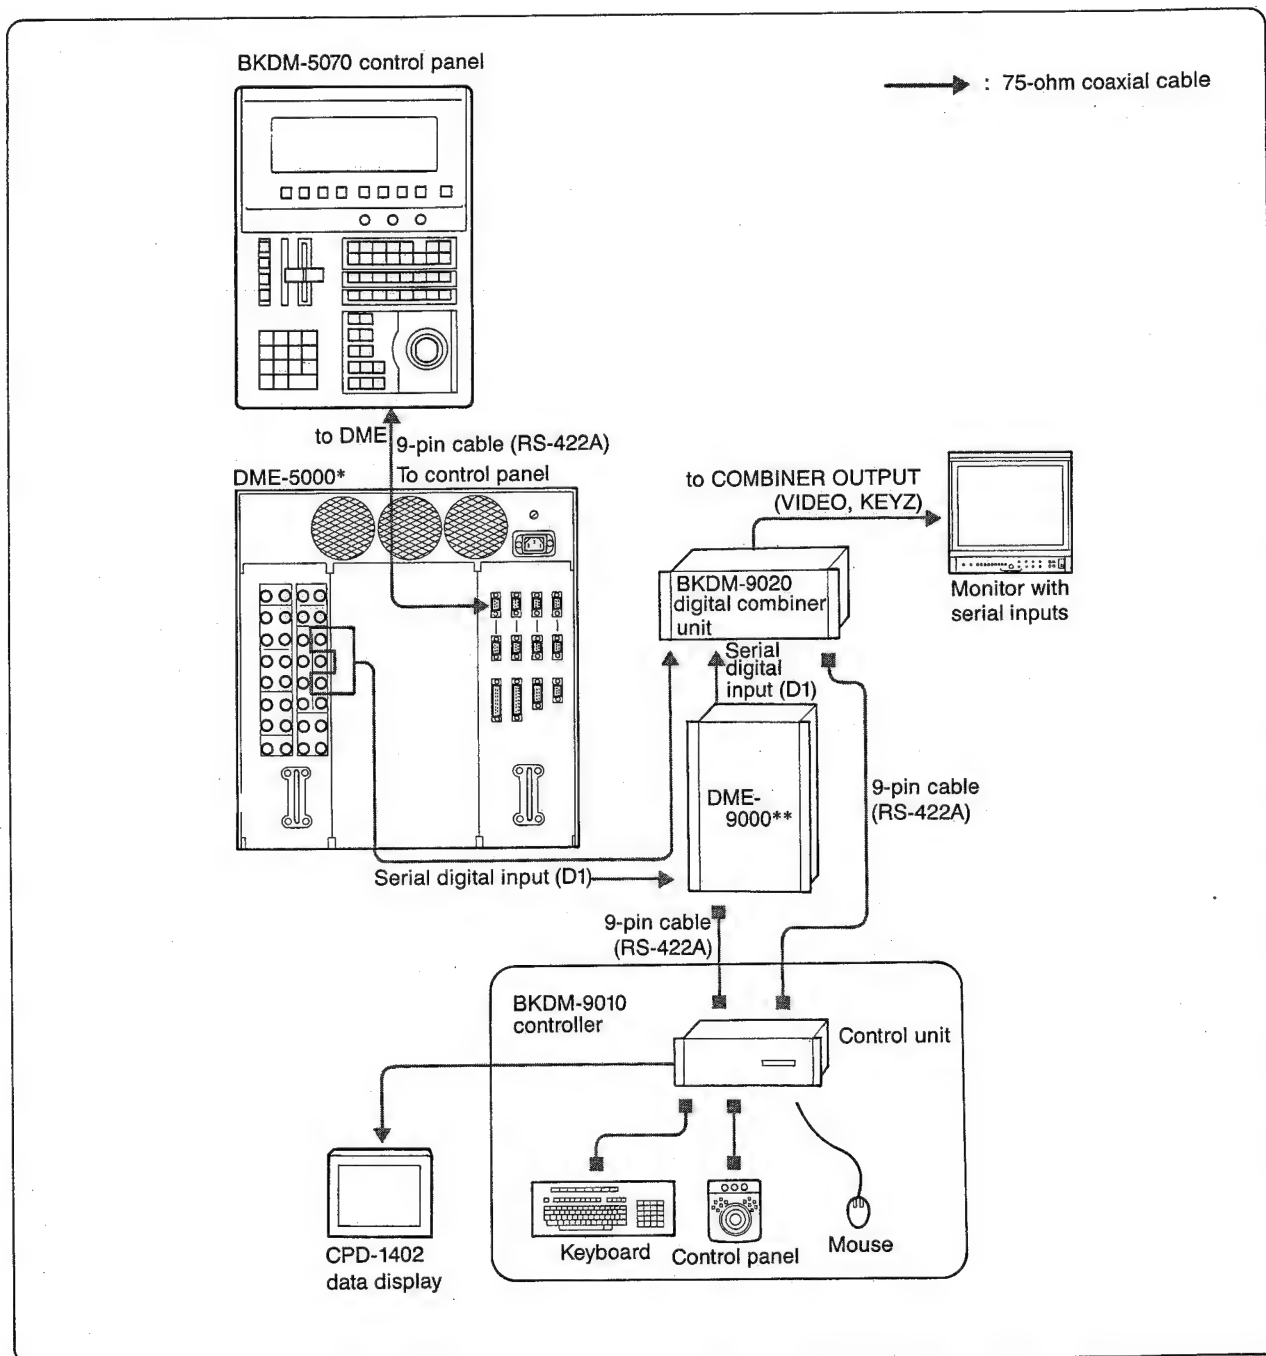

1-3-2. Connection with DVS-8000/8000C Digital Video Switcher

* For D1 mode: Connect COMBINER OUTPUTS (VIDEO and KEYZ) and COMBINER INPUTS (VIDEO and KEYZ) with 2 cables.

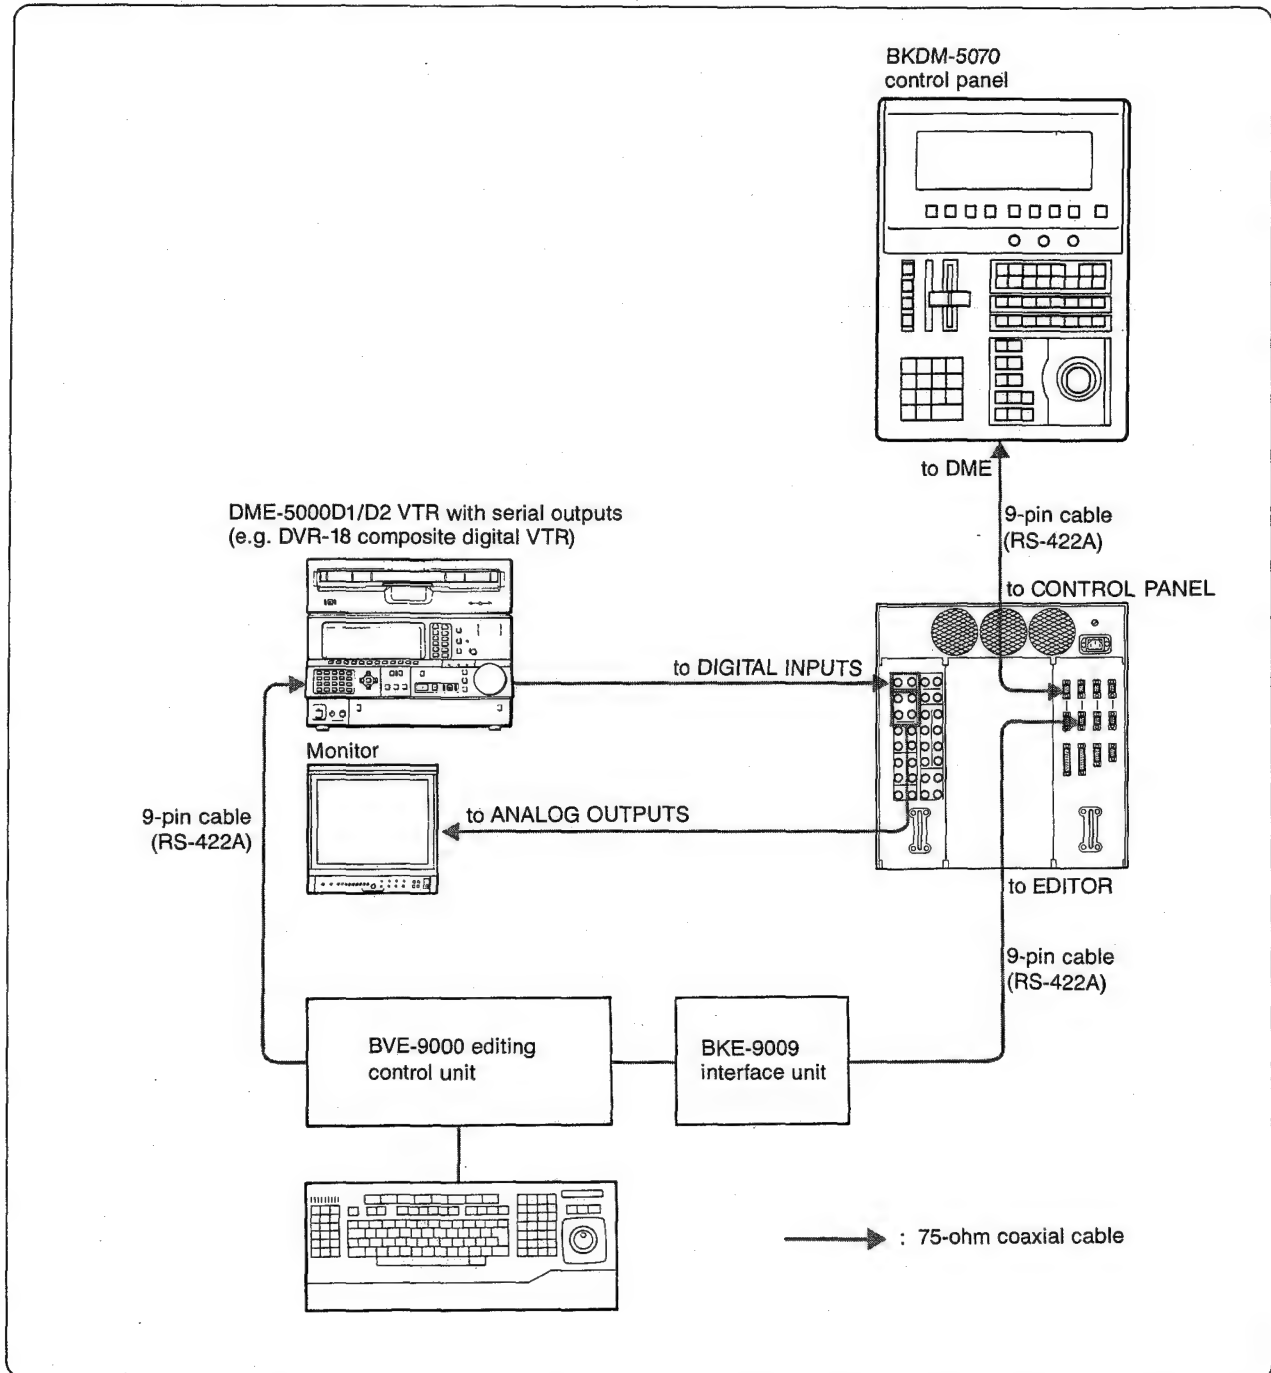

For D2 mode: Connect COMBINER OUTPUTS (Y, C, KEY, and Z) and COMBINER INPUTS (Y, C, KEY, and Z) with 4 cables.

1-3-3. Connection with DME-9000 Digital Multi Effects (for D1 mode)

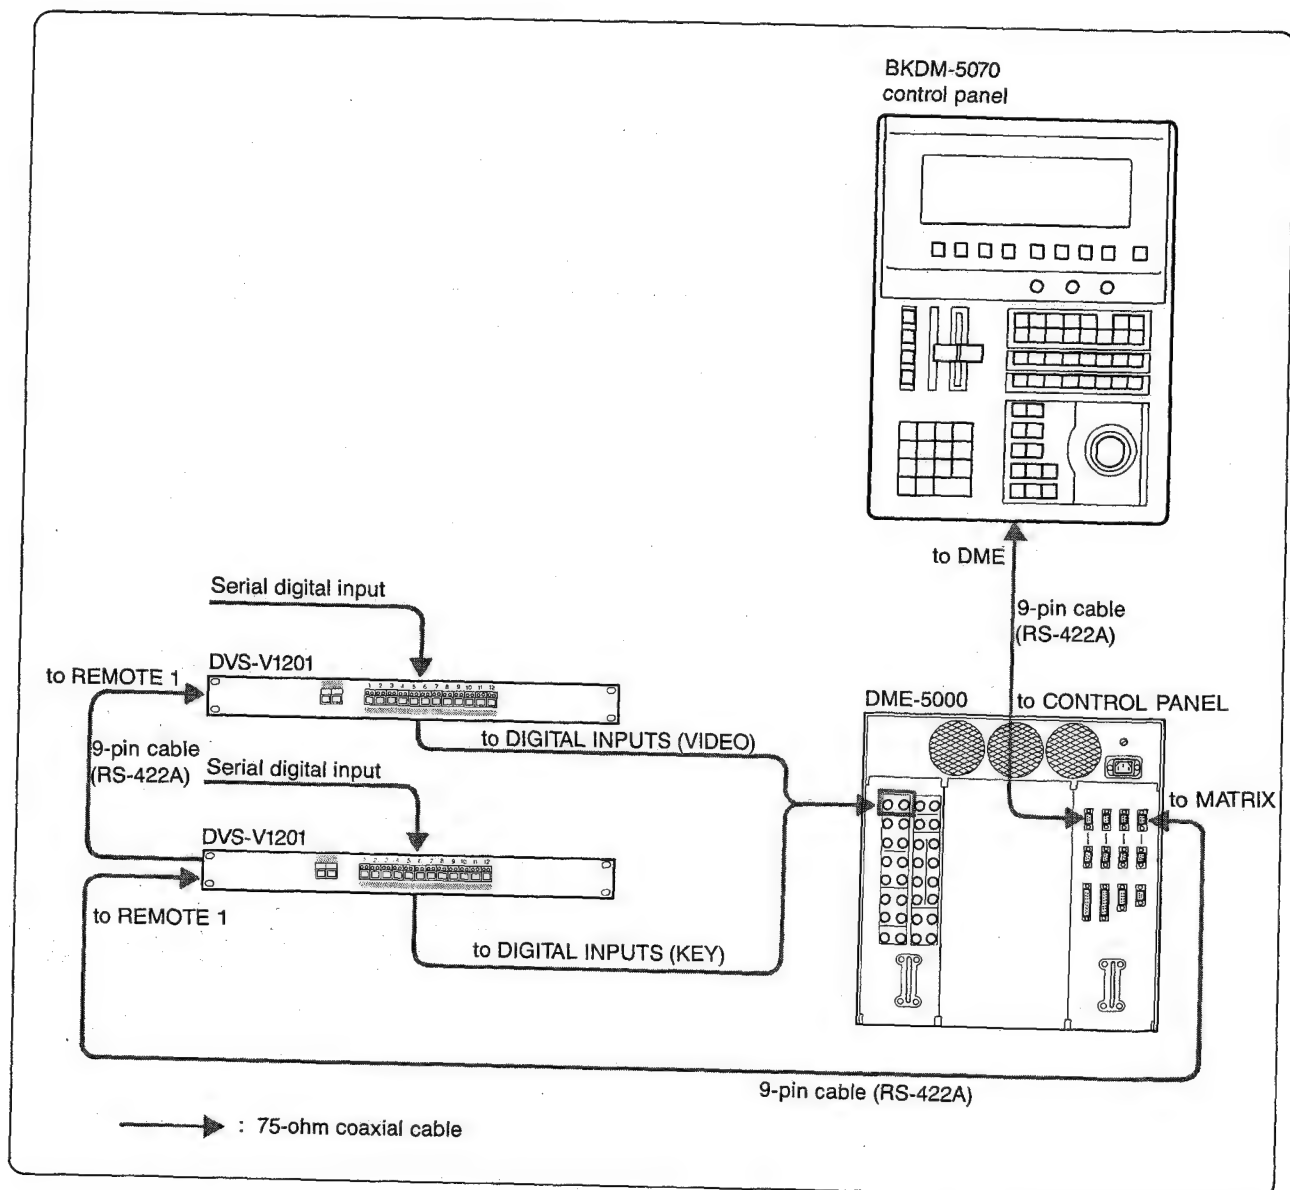

* The DME-5000 requires the BKDM-5021 option board.
 ** The DME-9000 requires the BKDM-9023 option board.

1-3-4. Connection with BVE-9000 Editing Control System

1-3-5. Connection with DVS-V1201 Digital Video Routing Switcher

1-4. Specifications

General

Power requirements	85-132/170-265 V AC switched automatically
Power consumption	Approx. 500 W (with full options)
Temperature	
Storage	-20°C to +55°C (-4°F to +131°F)
Operating	5°C to 40°C (41°F to 104°F)
Operating within specifications	10°C to 35°C (50°F to 95°F)
Humidity	
Operating	80% RH or lower
Operating within specifications	70% RH or lower
Dimensions (w/h/d)	424 × 443 × 450 mm, excluding projections (16¾ × 17½ × 17¾ inches)
Weight	50 kg (110 lb 4 oz)

I/O connectors

DIGITAL INPUTS	Component VIDEO For serial digital input signal, BNC (× 1), 75 ohms KEY For serial digital input signal, BNC (× 1), 75 ohms Composite VIDEO For serial digital input signal, BNC (× 1), 75 ohms KEY For serial digital input signal, BNC (× 1), 75 ohms
DIGITAL OUTPUTS	Component VIDEO For serial digital output signal, BNC (× 2), 75 ohms KEY For serial digital output signal, BNC (× 2), 75 ohms Composite VIDEO For serial digital output signal, BNC (× 2), 75 ohms KEY For serial digital output signal, BNC (× 2), 75 ohms
ANALOG INPUTS	Component Y, R-Y, B-Y For analog component input signal, BNC (× 3) Y: 1 Vp-p with SYNC R-Y, B-Y: 0.7 Vp-p KEY VS: 1 Vp-p, BNC (× 1) Composite VIDEO For analog composite input signal, BNC (× 1) KEY VS: 1 Vp-p, BNC (× 1)
ANALOG OUTPUTS	Component Y, R-Y, B-Y For analog component output signal, BNC (× 6) Y: 1 Vp-p with SYNC R-Y, B-Y: 0.7 Vp-p KEY VS: 1 Vp-p, BNC (× 2) Composite VIDEO For analog composite output signal, BNC (× 2) KEY VS: 1 Vp-p, BNC (× 2)
REF INPUT	Component For analog reference input signal, BNC (× 2) B.B.: 0.3 Vp-p Hi-z loop-through Composite For analog reference video input signal B.B.: 0.7 Vp-p

TERMINAL 1	Complying with RS-232C standard (D-SUB 25-pin)
TERMINAL 2	Complying with RS-232C standard (D-SUB 25-pin)
GPI	4 inputs and 4 outputs, programmable (D-SUB 15-pin)

Performance

Linearity	DG: 2% max. DP: 2° max. (RAMP signal superimposed with 40-IRE subcarrier)
Frequency response	±0.25 dB, 200 kHz to 4.2 MHz
Pulse characteristic	K: 1% max., 2T pulse
Signal-to-noise ratio	Over 52 dB

Sampling

Clock	D2 composite: 14.3 MHz D1 component: 13.5 MHz
Quantization	Analog: 9 bits Digital I/O: 10 bits (8 bits in memory)

Input phase difference absorption

Input error range allowable: -56 μs to +6 μs per frame

Accessories supplied

Rack mounting angles (1 set; fitted to the cabinet)
EX-270 extension board (1)
AC power cord (1)
Plug adapter for AC power cord (1)
75-ohm terminator (1)
Operation and maintenance manual (1)

Recommended equipment

BKDM-5070 control panel for DME-5000
DVS-8000/8000C digital video switcher
BKDS-8010 control panel for DVS-8000/8000C
BVE-9000 editing control system

Optional circuit boards

BKDM-5060 graphic data display board
BKDM-5021 D1 digital combiner board
BKDM-5020 D2 digital combiner board
BKDM-5013 D1 digital I/O board
BKDM-5012 D2 digital I/O board
BKDM-5011 D1 analog component I/O board
BKDM-5010 D2 analog composite I/O board
BKDM-5030 nonlinear effects board

Design and specifications are subject to change without notice.

SECTION 2 INSTALLATION

2-1. UNPACKING AND REPACKING

2-2. OPERATING ENVIRONMENT

- Take special care regarding the air circulation of the installation site to prevent the inside temperature of the unit from rising. Make sure not to block the ventilation holes on the unit.
- The operating ambient temperature of the unit is 5°C to 40°C. Do not install the unit near a heat source.

2-3. EXTERNAL DIMENSIONS

- The external dimensions of the unit are given below.

2-4. POWER VOLTAGE

- The DME-5000 power uses a switching regulator and is designed for use with 100V to 115V. Therefore, you can use the unit in the 100V to 115V range without changing the power voltage.

2-5. CONFIRMATION AND ADJUSTMENT AT INSTALLATION TIME

2-5-1. Setting the Power Voltage

After installing the unit, check the power voltage inside the unit.

- (1) Open the front panel. Check whether the power unit is properly inserted and fixed with 4 screws shown the arrows of front side (+ PWH4x8).
- (2) Turn ON the power and see whether the operation indicator LEDs (D1 to D8) on the edge of the CPU-82 board flash sequentially.

* If none of the lamps light, there is no power voltage (+5V) output. If none of the lamps light and the fan is rotating, the +5V supply is defective. If none of the lamps light and the fan does not rotate, the primary side of the power unit is defective. If the lamps light and the LEDs stop flashing, this could mean a CPU-82 board error or voltage error in the +5V and $\pm 12V$ supplies. Check and adjust the voltage using the procedure given below.

- ① See Section "3-5. How to Use the Extension Board" to connect the IF-293 board (slot No. 18) and the extension board.
- ② Measure the +5V at TP-1 (GND) and TP-2 (+5V) on the extension board and make sure you get $+5V \pm 0.05V$.
- ③ Measure TP-3 (+12V), TP-6 (GND), and TP-9 (-12V) on the extension board and make sure you get $+12V \pm 0.1V$ and $-12V \pm 0.1V$ respectively.
- ④ Measure the -5V at TP-1 (GND) and TP-12 (-5V) on the extension board and make sure you get $-5V \pm 0.05V$.

⑤ If the measured values differ from the specified values, adjust the voltage using the procedure given below. Adjust the digital voltmeter while connecting it to the TPs mentioned above.

1. Remove the adjustment window cover of the power unit.
2. Insert an adjustment driver through the adjustment window and turn the voltage adjustment volume of the corresponding switching regulator. Observing the digital voltmeter reading, adjust the voltage until you obtain the proper voltage.

Note : Set the power voltage with all the card boards inserted in their locations (excluding the option boards).

2-5-2. How to Install the Card Boards

Each printed circuit board must be installed in a designated slot of the DME-5000. Check whether each printed circuit board is installed in the proper slot as indicated in the table below.

Slot No.	Board Name	Slot No.	Board Name
1	CPU-82	14	DPR-15
2	DSC-58 (BKDM-5060)	15	DPR-16
3	Option Board	16	DLP-12 (BKDM-5020)
4	Option Board		*DLP-11 (BKDM-5021)
5	ALU-13 (BKDM-5030)	17	DIF-8 (BKDM-5010 or -5012)
6	ALU-12 (BKDM-5030)		*DIF-9 (BKDM-5011 or -5013)
7	ALU-11		
8	DPR-18	18	IF-293 (BKDM-5010 or -5012)
9	DPR-17		*IF-294 (BKDM-5011 or -5013)
10or12	MEM-41 (YorK)		
11	MEM-41(C)		
13	DLP-9, 10		

*: Used by D1 mode.

- The name of the printed circuit board and the slot number in which the board can be installed are indicated on both sides A and B of the upper portion of the board toward you.
(See the illustration below.)
- The DME-5000 can accommodate various systems and expand its functions by installation of option boards. Install each option board in the designated range and sequence in accordance with the slot number indicated on the upper portion of the board toward you, in the same way as the main printed circuit boards.

Note 1) Check whether the connectors of each printed circuit board are properly connected to the MB-305 board of the main body.

Note 2) If the printed circuit boards are installed in a wrong sequence, system error will occur and the unit will not operate properly.

Note 3) When you add an option board or when you adjust a printed circuit board, make sure to check the power voltage.

2-6. CONNECTORS

When you connect a cable to the connector on the rear panel during installation or maintenance service, use the hardware listed below or equivalent.

Panel Display	Connecting Connectors /Part No.

2-8. RACK MOUNTING

The DME-5000 can be used by mounting it on a 19-inch standard rack. When you use the rack, make sure to use the optional RMM-18DV rack mount rail.

< Items to be procured for mounting >

- RMM-18DV rack mount rail
- Screws for attaching the plate nut (+B4x8) 8 pieces
- Rack mount screws (+RK5x16) 4 pieces
- Rack mount decoration washers 4 pieces
(Sony part number 2-297-913-01)

< Precautions on installation >

- (1) When you install the DME-5000 and related units in the 19-inch standard rack, it is recommended that you install a ventilation fan to prevent the temperature in the rack from rising. Make sure that all the units in the rack operate in the temperature range of 5°C to 40°C.
- (2) When you install the unit in the rack, make sure to use the specified rail. The unit cannot be secured to the rack by the rack angles alone and such an installation is hazardous.
- (3) It is recommended to fix the rack to a solid floor with bolts. It is hazardous if the rack falls on you when you remove the unit from the rack.
- (4) The package of RMM-18DV rack mount rail contains a supplied installation manual. That manual, however, contains instructions for installing the DVR series VTRs on the rack. Since the procedure for mounting the DME-5000 differs partly from the procedure for mounting the VTR, use the procedure given in this manual instead.

< Installation method >

- (1) While pressing the stopper of the RMM-18DV rack mount rail, pull out the inner member.

- (2) Use the 16 screws (+ B4x8) supplied with the RMM-18DV to attach the inner member to the unit. Remove the 2 screws (+ PWH4x8) on the top panel. Remove the legs of the unit as required.

- (3) Use the 8 screws (+ B4x8) procured for mounting to fix the bracket lightly to the outer member ①. At this time, move the outer member ② forward and backward so the screw hole of outer member ① can be seen.

- (4) Use the 4 screws (C4x12) and washers (W4) supplied with the RMM-18DV to fix the outer member assembly lightly to the rack. At this time, adjust the installing position of the outer member. After adjustment, tighten the screws (+ B4x8) that were lightly fixed in step (3).

- (5) Before you place the unit in the rack, release the stopper of the inner member. After making sure the unit can be smoothly placed in the rack, tighten the screws (C4x12) that were lightly fixed in step (4).

- (6) After you placed the unit in the rack, use the 4 screws (+ RK5x16) and four decoration washers procured for mounting to fix the unit to the rack.

- The maximum distance when the DME-5000 is mounted in the rack is indicated below.

2-9. SUPPLIED ACCESSORIES

- EX-270 Extension Board (1)
- Power Cord (1)
- Power Cord Adapter (1)
- 75 Ω Terminator (1)
- Operation and Maintenance Manual (1)

2-10. OPTIONAL ACCESSORIES

- BKDM-5010 : Composite Input/Output Board
- BKDM-5011 : Component Input/Output Board
(to be available soon)
- BKDM-5012 : Digital Composite IN/OUT Board
- BKDM-5013 : Digital Input/Output Board
(to be available soon)
- BKDM-5020 : Digital Combiner Board
(to be available soon)
- BKDM-5021 : Digital Combiner Board
(to be available soon)
- BKDM-5030 : Non-linear Effects Board
(to be available soon)
- BKDM-5060 : Graphic Data Display Board
(to be available soon)

SECTION 3

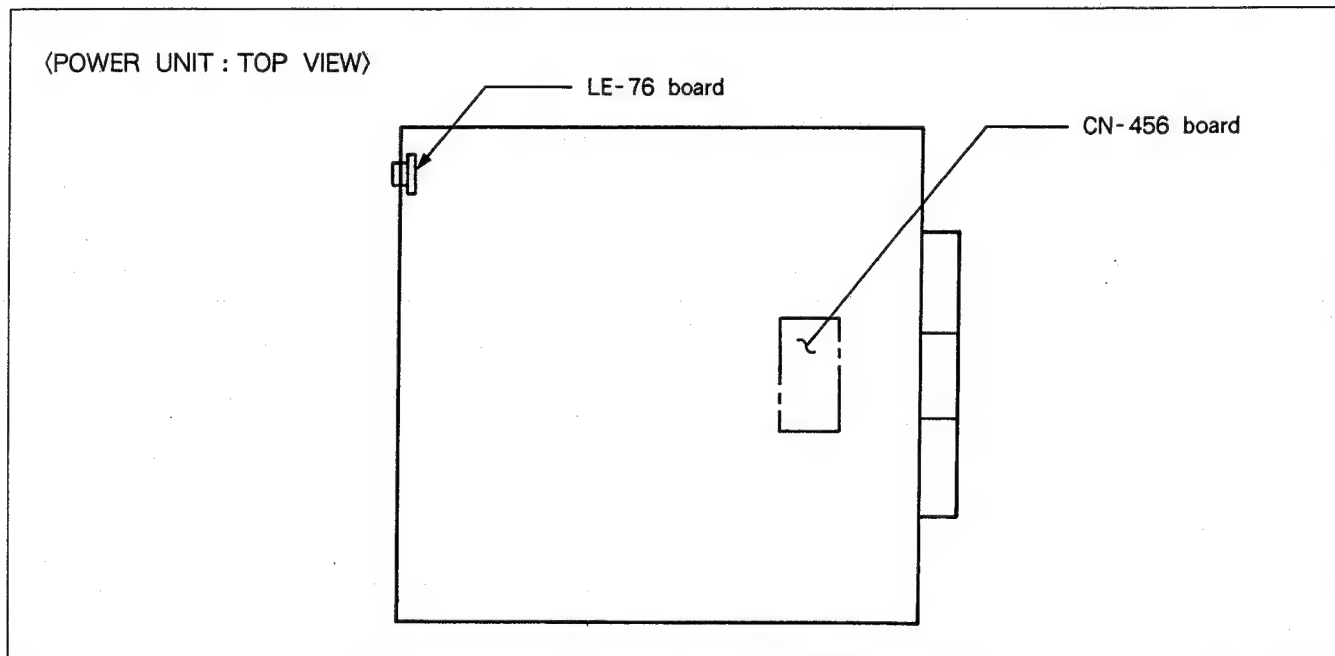

SERVICE INFORMATION

3-1. REMOVAL OF PANELS

- (1) Remove 4 screws of "a" (+PWH4x8), and remove the upper panel by pulling it out in your direction.
- (2) Release the lock of "b" and open the front panel.
- (3) Lift the hinge pin and to the upper groove as shown in inset figures ① to ③ to remove the front panel.

3-2. LOCATION OF PRINTED CIRCUIT BOARDS

3-3. CIRCUIT INFORMATION

Board	Function
ALU - 11	Real-time Numeric Data Processor
CN - 456	Power Supply Connector Board
CN - 462	BNC Connector Board
CN - 463	D SUB Connector Board
CPU - 82	System Control and Communications
DLP - 9	Horizontal and Vertical Low Pass Filter
DLP - 10	IIR Vertical Low Pass Filter
DPR - 15	Input Pixel Effect Generator and Motion Detect
DPR - 16	Output Recursive Effect Generator and Border Generator
DPR - 17	Memory Address Selector and Write Address Generator
DPR - 18	Read Address Generator and Split Mirror Generator
LE - 76	Power LED Board
MB - 305	Mother Board
MEM - 41	3 Field Video Memory and Interpolator

3-4. HOW TO INSTALL AND REMOVE THE BOARDS

- (1) Remove 12 screws of "a" (+ PWH4x8), board stopper, and board holder.

- (2) Insert the board in the slot along the board guide rail. To install the board, press the board lever in the direction of arrow ② while pushing the board inside.

- (3) To remove the board, pull the board lever in the direction of arrow ① and pull out the board in your direction.

Note) After installing the board, check whether the connector is firmly connected to the MB-305 board.

3-5. HOW TO USE THE EXTENSION BOARD

• EX-270 EXTENSION BOARD

- (1) Pull out the board to be adjusted in the manner described in section 3-4. How to Install and Remove the Boards.
- (2) Insert the extension board into the slot and press the board lever to secure the board.

- (3) Open the rail of the extension board. (Open the rail completely until it locks.) Insert the board to be adjusted along the rail of the extension board and make the adjustment.

- (4) After adjustment, press the eject lever in the direction of arrow and pull out the adjustment board in your direction.

- (5) Push the board lever in the direction of arrow and remove the extension board by pulling it in your direction.

3-6. SERVICE PARTS

(1) Safety Related on Components Warning

Components with \triangle on the schematic diagrams, exploded views and electrical spare parts list are to maintain safe operation. Replace these components with Sony parts specified in this manual or in service manual supplements published by Sony.

(2) Standardization of Parts

Replacement Parts supplied from Sony Parts Center may sometimes have different shape and outside view from the parts which are actually in use. This is due to "standardization of genuine parts". This manual's exploded view and electrical spare parts list are indicating the part numbers of "the standardized genuine parts at present".

(3) Stocked of Parts

The parts marked with "s" in the SP column of the exploded views and electrical spare parts lists are normally stocked for customer's inquiry.

However, orders for parts, marked with "o" may not be ready which require additional delivery time when ordered.

SECTION 4

REPLACEMENT OF MAIN PARTS

4-1. LOCATION OF THE MAIN PARTS

4-2. REPLACEMENT OF THE SWITCHING REGULATORS

- (1) Remove the front panel in the manner described in section 3-1.
- (2) Remove 4 screws (+PWH4x8) and pull out the power unit in your direction.

- (3) Remove the harness from 11 wire clamps.

(4) Remove the screws that install the switching regulators.

① EWS600-5

Remove 2 screws of "a" (+ PWH4x6) and loosen 2 screws of "b" (+ PWH4x6).

② EWS50-5

Remove 2 screws of "c" (+ PWH3x5) and loosen 1 screw of "d" (+ PWH3x5).

③ LWT-4H522

Remove 1 screw of "e" (+ PWH3x5) and loosen 1 screw of "f" (+ PWH3x5).

(5) Lift each switching regulator while pushing it in the direction of arrow as shown.

(6) Remove the harness and connectors.

① EWS600-5

Loosen 2 nuts of the switching regulator and disconnect the harness. Remove also the terminal cover and 4 screws to disconnect the harness.

② EWS50-5

Remove the terminal cover and 4 screws of the switching regulator to disconnect the harness.

③ LWT-4H522

Disconnect 2 connectors of the switching regulator.

(7) Remove the switching regulator.

(8) Install the switching regulator in the reverse order of removal.

4-3. REPLACEMENT OF THE DC FAN

(1) Remove the front panel in the manner described in section 3-1.

(2) Remove 4 screws (+PWH4x8) and pull out the power unit in your direction.

(3) Remove the harness from 2 wire clamps.

(4) Cut the wire clamps that fasten the connectors (CN4 and CN5).

- (5) Disconnect the connectors (CN2, CN3, and CN4) on the CN-456 board.

- (6) Remove 4 screws (+ B4x30) and remove the DC fan.

- (7) Perform steps (1) to (6) in reverse to install the new DC fan.

SECTION 5

TECHNICAL INFORMATION

5-1. DEFECTIVE PARTS DIAGNOSTICS

- (1) Trouble in BORDER, EXTKEY, MOSAIC, LIGHTING, and motion detect

If you turn ON 1, 2, and 3 of S1 on the DPR-15 board when there is any trouble in BORDER, EXTKEY, MOSAIC, LIGHTING, or motion detect, the Y, C, and K boards will assume a through mode. If the trouble can be corrected under this condition, the DPR-15 board is defective.

- (2) Trouble in RECURSIVE effect, DROPSHADOW, MULTI FREEZE, and MONTAGE.

If you turn ON 1, 2, and 3 of S7 on the DPR-16 board when there is any trouble in RECURSIVE effect, DROPSHADOW, MULTI FREEZE, and MONTAGE effect, the Y, C, and K boards will assume a through mode. If the trouble can be corrected under this condition, the DPR-16 board is defective.

- (3) Trouble in MIRROR, SPLIT, and MULTI MOVE effect.

If you turn ON 1 of S8 on the DPR-18 board when there is any trouble in the shifting, enlargement/reduction, rotation, and non-linear shape effect of the image, the address at the read side will be passed. If the MIRROR, SPLIT, and MULTI MOVE effect trouble can be corrected under this condition, the DPR-18 board is defective.

- (4) Trouble in Y, C, or K board during shifting, enlargement/reduction, and rotation.

If you turn ON 1 of S4 on the MEM-41 board when there is any trouble in the Y, C, or K board during shifting, enlargement/reduction, or rotation, the memory will be passed. If the trouble can be corrected under this condition, one of the boards MEM-41 (Y), MEM-41 (C), or MEM-41 (K) is defective.

- (5) Trouble during reduction (when using the LOW PASS filter)

If you turn ON 1, 2, and 3 of S1 on the DLP-9 board when there is an image trouble during a particular reduction which uses the LOW PASS filter to cope with the reduction rate during reduction, the Y, C, and K boards will assume the through mode. If the trouble can be corrected under this condition, the DLP-9 board is defective.

- (6) Vertical/horizontal address error

When there is a vertical/horizontal address error, if the error cannot be corrected after turning ON 1 of S4 on the MEM-41 board (any one of the Y, C, or K board) and 1 of S8 on the DPR-18 board, the DPR-17 board is possibly defective.

- (7) Trouble in shifting, enlargement/reduction, and rotation

When there is a trouble during shifting, enlargement/reduction, or rotation, if the trouble is corrected by turning ON S8 on DPR-18 board, the ALU-11 board is possibly defective.

- (8) Power supply trouble

- Trouble in the fan and POWER lamp indicates a defective +5V system of LWT-4HA522 (switching power of the multi-output).
- If the LEDs (D1 to D8) on the CPU-82 board do not light at all, the EWS600-5 power (+5V) supply is possibly defective.
- Pull out the power supply unit and make sure that the power LED on the EWS600-5 power supply is illuminating.
- If there is no analog output (sync/burst) when the analog video output power is tested using an oscilloscope, the $\pm 12V$ supply is defective.
- When only in the digital serial is unfunctional, the -5V system of the EWS50-5 power supply is possibly defective.
- Pull out the power supply unit and make sure that the power LED on the EWS50-5 power supply is illuminating.

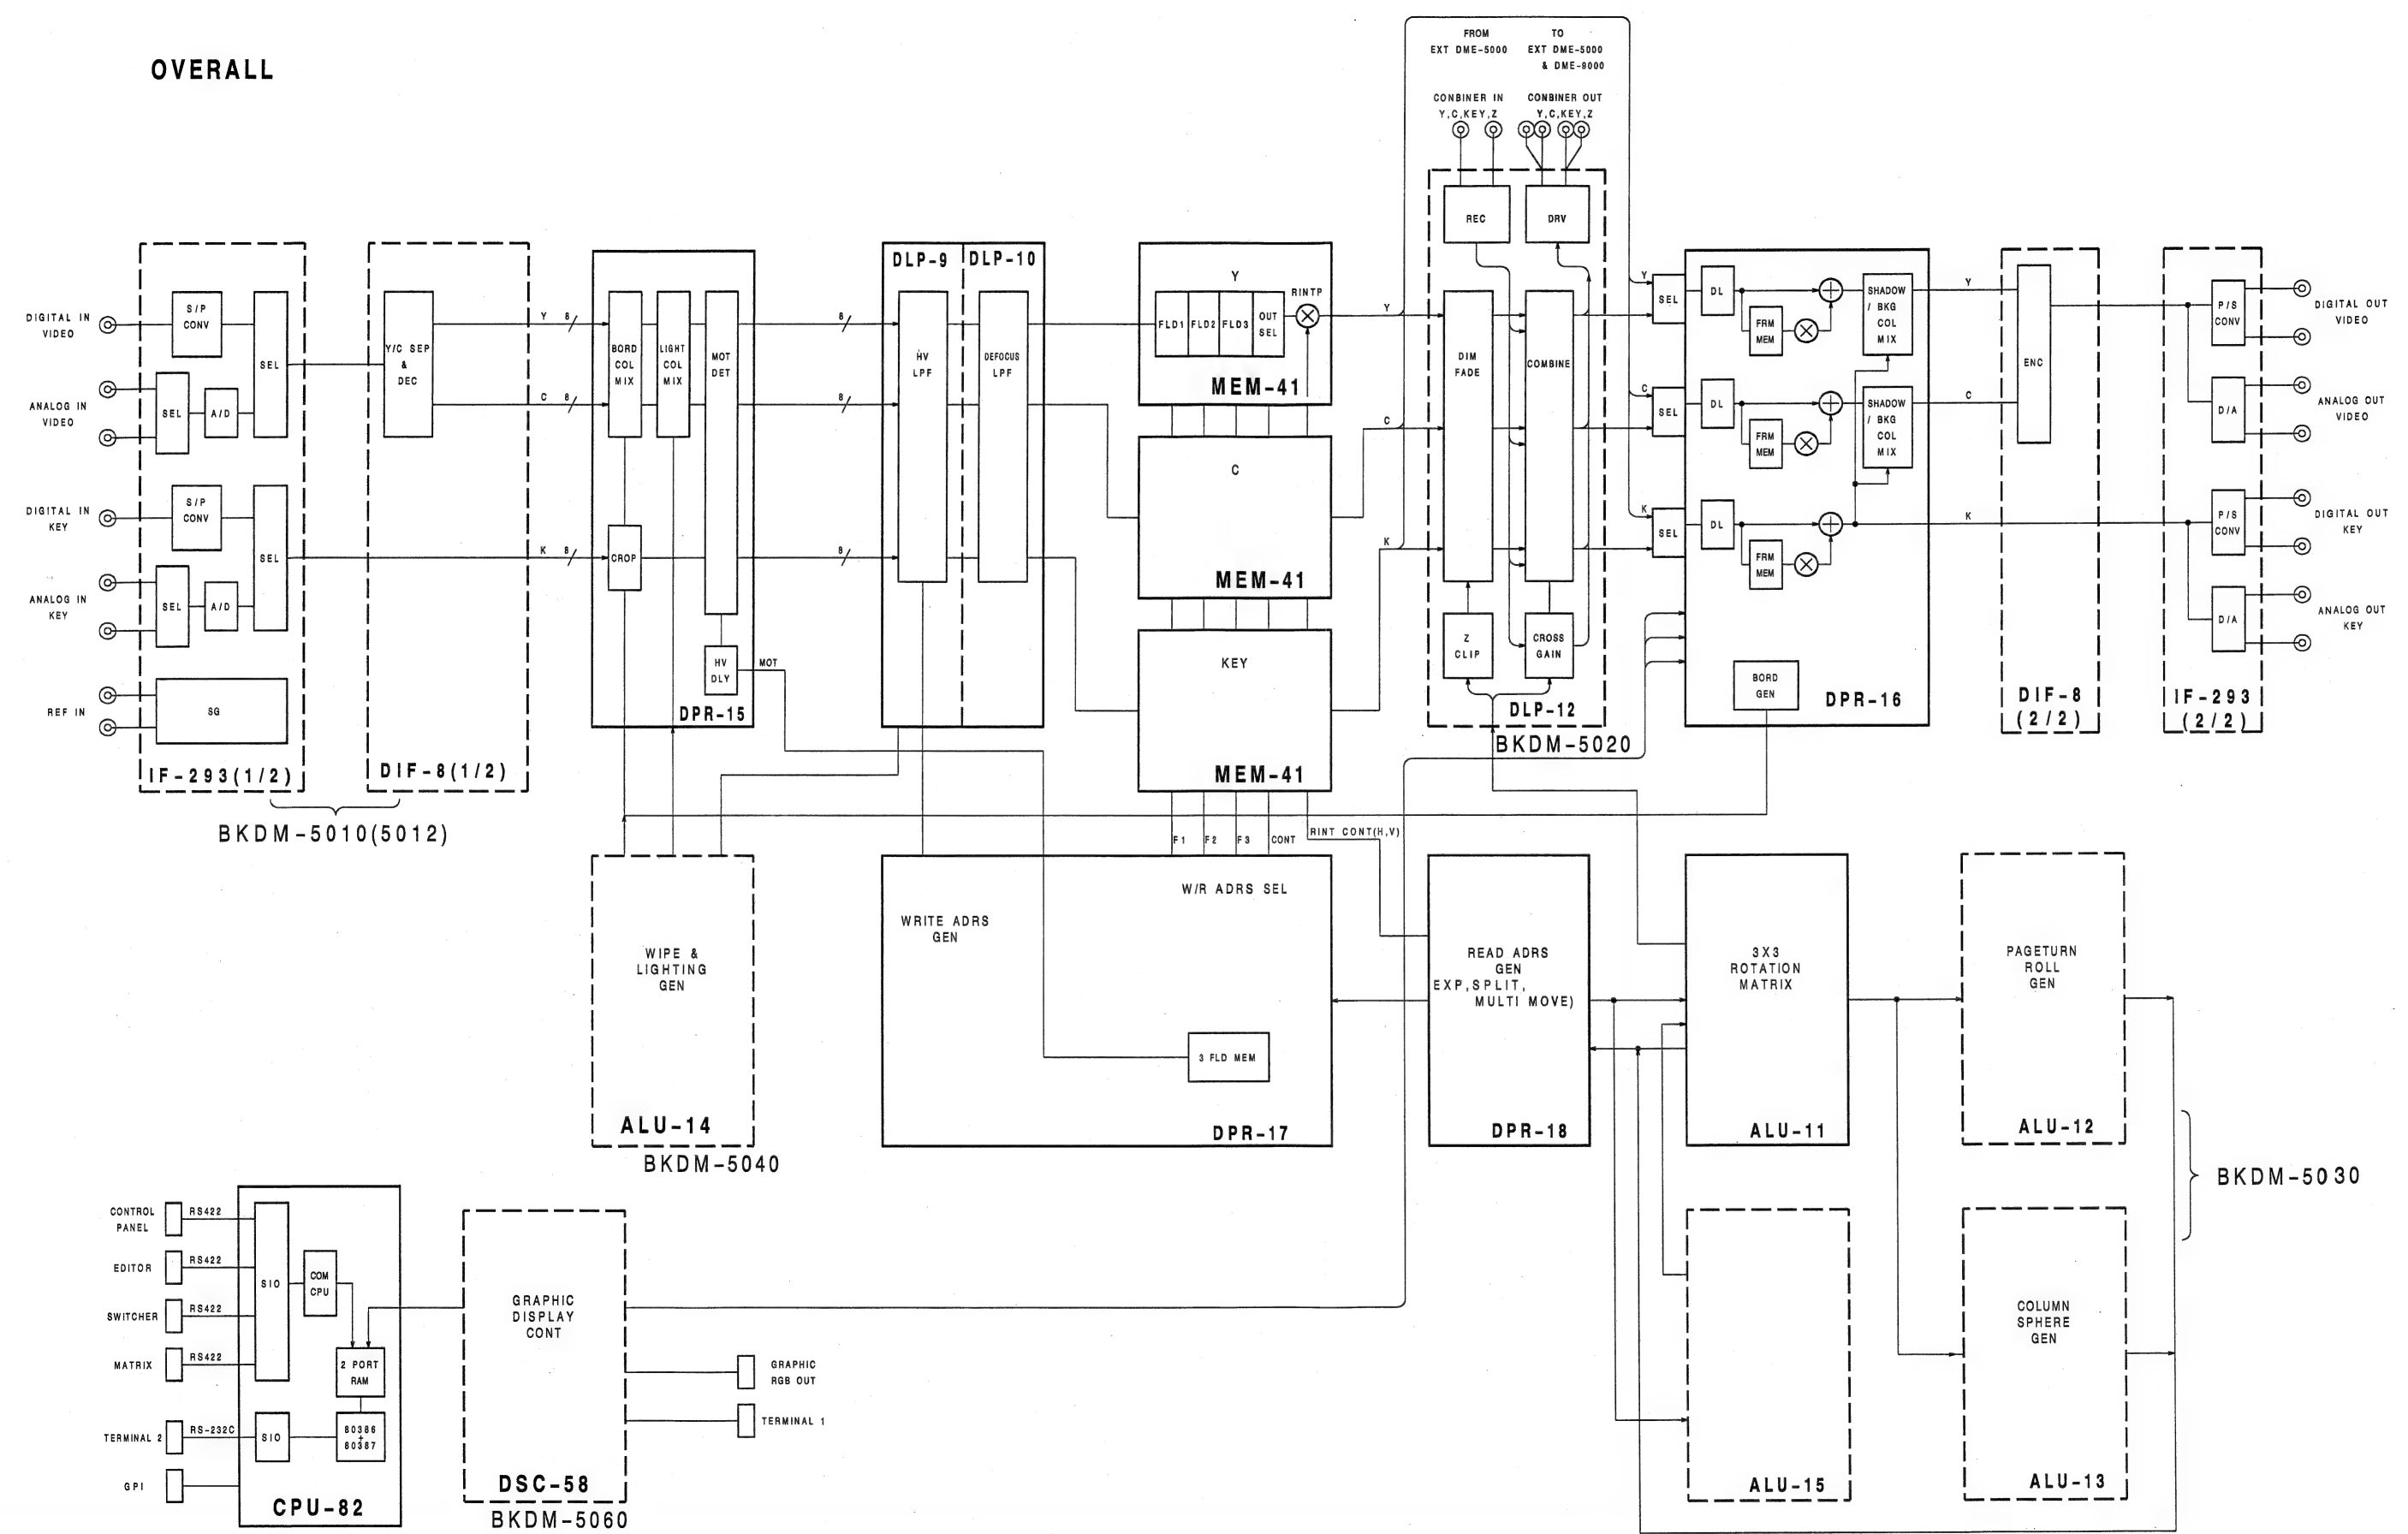

5-2. SELF-DIAGNOSTICS

The CPU-82 board self-diagnostics can be performed using the SET UP menu of the control panel. See the Operation Manual of the control panel for details.

SECTION 10 SPARE PARTS

10-1. PARTS INFORMATION

- (1) The shaded and Δ marked components are critical to safety.
Replace only with same components as specified.
- (2) Replacement Parts supplied from the Sony Parts Center will sometimes have a different shape from the original parts. This is due to improved parts and/or engineering changes or standardization of genuine parts.
This manual's exploded views and electrical spare parts list indicate the part numbers of the standardized genuine parts at the present.
Regarding engineering part changes by the engineering department, refer to Sony service bulletins and service manual supplements.
- (3) The parts marked with "s" in the SP column of the exploded views and electrical spare parts lists are normally stocked for replacement purposes. The parts marked with "o" in the SP column are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional delivery time.
- (4) Items with no part number and/or no description are not stocked because they are seldom required for routine service.
- (5) All capacitors are in micro farads unless otherwise specified.
All inductors are in micro henries unless otherwise specified.
All resistors are in ohms.
